

BETTER BROADBAND IN SUFFOLK MAKING A DIFFERENCE BUSINESS SUPPORT

React Computer Partnership

Who are they?

React Computer Partnership specialise in supplying and supporting IT systems for small to medium sized businesses. They work with businesses to support and give guidance in evolving IT systems along with providing both remote and onsite support services, offering fast and effective solutions. The company provides fibre broadband as standard, even to businesses with remote access.

What are they doing?

React Computer Partnership have developed a complete and effective disaster recovery system for small and medium businesses. The company has combined the technology to replicate the data and transmit it to another location with industry standard software. Now, in the case of flood, fire or damage to the company premises, the office can be up and running again in a new location in a matter of minutes.

How is superfast broadband making a difference?

By having superfast broadband, it has allowed recovered data to move more quickly and simply. Copies of data can now be used to run the business if there is a disaster and the main unit is destroyed. Along with this, if businesses are unable to work in the office due to a disaster, the data can be brought up online and work can continue, even from remote locations.

What do they think?

“Superfast broadband has enabled our disaster recovery system to progress in leaps and bounds. Due to this, our customer base has increased considerably, with us providing a fantastic, reliable service to our customers.”
